

ii Stationary Signage

indicators
International

ii stationary signage is a great tool in this information age to encourage bus use; to increase the convenience of your service by providing specific, up-to-date information.

ii Stationary signage can use flip-dot, LED, LCD or TFT technology. The system can be programmed to a set list or linked to a real-time information system for digital communications that are instantly up-to-date.

The ii system can be used at bus stops, station platforms or public venues - wherever your passengers will find it useful.

We reserve the right to alter products and/or their specifications at any time without prior notice.
