

ii Destination Software TED Plus

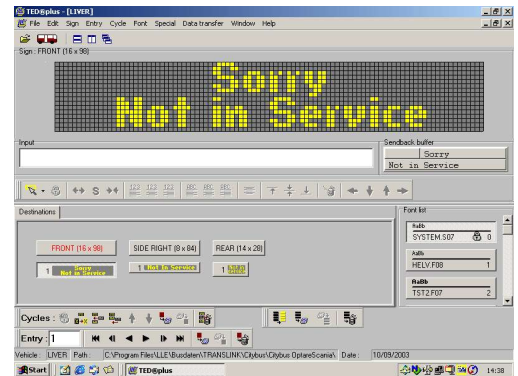

indicators International

TED Plus is designed for easy programming of ii destination displays. The latest version allows the flexibility of hundreds of fonts and the capability to design your own letters, graphics or logos.

The Windows based software is written for operation with Microsoft Windows 95, 98, 2000, NT and XP. It is also fully compatible with its predecessor, TED 900, so that existing data may continue to be used.

The TED Plus interface is designed for clear, easy use and allows you to view the data being entered as it will appear on the sign. Copying, editing, inserting and deleting entries is quick and easy. Scrolling or cycling text entries are programmed at the click of a button. Destinations can be printed out in lists or separately. A range of language versions are available.

TED Plus now has an integrated download manager so that data can be directly transmitted onto pc card ready for the vehicle.

screen from the TED Plus software

Minimum System Requirements

Operating System	Microsoft Windows 95, 98, 2000, NT, XP
Graphics Board	256 colours, resolution 800x600 pixel
